

Diversifying your entire investment portfolio

This table shows the importance of remaining diversified in stocks and bonds from around the world to take advantage of opportunities wherever they may appear.

Are your portfolio returns as consistent as they could be?

Calendar-year total returns of selected asset classes (%)

2012	2013	2014	2015	2016	2017	2018	2019	2020	2021

Figures shown are past results and are not predictive of results in future periods. The return of principal for bond funds and funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds. Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies, such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness. Investing outside the United States involves risks such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Investing in international government and emerging market debt is subject to additional risks. Small-company stocks entail additional risks, and they can fluctuate in price more than larger company stocks. Diversification does not eliminate the risks of investing.
